Zenith CloudWorks

Proposal in response to **MRG-RFP-2026-014**: Omnichannel Customer Service & Ticketing Platform
Submitted to: Meridian Retail Group (fictional)
Submission date: 2026-09-25 | Proposal validity: Not stated
Contact: info@zenithcloud.example

Synthetic document created for a classroom exercise. All companies, people, clients and figures are fictional.

1. Introduction

Zenith CloudWorks is pleased to respond to Meridian's requirement for a customer service platform. Zenith is an AI-first company that believes chatbots will handle the majority of customer queries in the near future.

2. Our Solution

ZenBot is a generative-AI chatbot that can answer customer questions on websites and WhatsApp, reducing the need for human agents. Human hand-off to agents is possible using a third-party helpdesk of the customer's choice.

- Trains on your FAQs and policy documents within days.
- Supports 12 Indian languages.
- Can connect to any system through APIs.
- Email and voice channels are not part of ZenBot.

We believe Meridian can reduce its agent headcount significantly with ZenBot. Our solution will be configured according to Meridian's needs.

3. Approach

We will start with a proof of concept, then expand. Exact timeline will depend on the proof-of-concept results. Team details will be shared at the time of contracting.

4. Pricing

Pricing is usage-based and will be shared on request after understanding Meridian's monthly conversation volume. A free 30-day proof of concept is offered.

5. Security

ZenBot runs on secure cloud infrastructure.

6. About Us

Zenith CloudWorks was founded in 2025 and has a passionate team of AI engineers. We are currently working with early-adopter customers. Customer names cannot be disclosed. Support is provided by email.
